Process Associate
Algolitics India LLP Coimbatore - Coimbatore, Tamil Nadu
July 2019 to March 2020

Client: Owner of the Stores in Canada, Swizterland, Europe, USA, Uk

Role: Automation tool Monitoring and Checking the Extracted data manually
Responsibilities:

● The Responsibility of mine in this company is to run the automation tool which is developed by java and python Developer.
● In this project we have to extract the data from the site by running this tool. We know very well that sites will be change dynamically. Because of Dynamic in nature data in the site will change frequently.
● Have to run the tool the purpose of running the tool is to extract the datas from the site.
● The tool might have stuck in between the extraction of data if its got stuck data will not be generated to avoid this we have to monitor tools then and there whether its running properly or not and whether data are generated or not.
● To make sure that whether the data are available in database we have to check those data by executing the MYSQL queries.
● After extraction manual work is to be done We have to check whether datamare generated should be same as given in the site if not we have report it to the developer who developed this tool.
● We are running java tool to check whether there is any changes occurred in the site.
● After this process we iwill upload this data into DB and deliver it to client.
